SUMMARY

B.Tech undergraduate specializing in Artificial Intelligence & Data Science with hands-on experience building full-stack applications using Python, Flask, and PostgreSQL. Skilled in REST APIs, relational database design, data analysis, and machine learning fundamentals, with a focus on building practical software solutions.

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL

Web Development: HTML5, CSS3, JavaScript, Bootstrap, Flask, Jinja2, REST APIs

Machine Learning: Classification, Regression, Clustering, Model Evaluation

Data Science: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Databases: PostgreSQL, MySQL, MongoDB

Tools: Git, GitHub, VS Code, pgAdmin, Jupyter Notebook

Cloud: Microsoft Azure, Azure App Service

PROJECTS

Salon ERP System

[GitHub](#) | [Live](#)

Flask, PostgreSQL, Jinja2, Bootstrap

- Built a role-based ERP platform with five distinct user roles — Admin, Manager, Receptionist, Staff, and Customer — using an MVC architecture.
- Implemented authentication and authorization, appointment scheduling, CRM, payment processing, live dashboards, and automated email notifications.
- Designed a normalized PostgreSQL schema with foreign-key constraints to enforce data integrity and eliminate redundancy.

VoyageIQ — Smart Travel Decision Platform

[GitHub](#) | [Live](#)

Python, Flask, PostgreSQL, JavaScript, REST APIs

- Built a travel intelligence platform that consolidates flights, hotels, weather, budget estimation, and travel recommendations into a centralized planning dashboard.
- Integrated external APIs — Google Flights/SERPAPI, Google Hotels/SERPAPI, and Open-Meteo — to surface live pricing and weather data alongside saved trips and user preferences.
- Consolidated travel information into a single dashboard, reducing the need for multi-tab switching by ~80%.

Loan Approval Prediction

[GitHub](#)

Python, Pandas, NumPy, Matplotlib, Seaborn, scikit-learn

- Built a classification pipeline to predict loan approval using applicant financial, demographic, and credit-related features.
- Performed data preprocessing, missing-value imputation, exploratory analysis, categorical encoding, correlation analysis, and feature scaling.
- Compared **Logistic Regression, KNN, and Gaussian Naive Bayes**, achieving **86.5% accuracy** with Logistic Regression and Gaussian Naive Bayes.
- *More Projects: AI/ML, Data Science, Backend & Cloud projects available on [GitHub](#).*

EDUCATION

Bachelor of Technology (B.Tech) — Artificial Intelligence & Data Science

Expected

Graduation: 2028

Relevant Coursework: Database Management Systems, Object-Oriented Programming, Machine Learning

CERTIFICATIONS

- Microsoft — Azure Fundamentals
- Deloitte — Data Analytics Job Simulation
