Professional Summary

Aspiring Software Engineer and Artificial Intelligence & Data Science undergraduate with hands-on experience in full-stack web development, Python programming, and relational database design. Skilled in building scalable, role-based business applications using Flask, PostgreSQL, and MySQL, including authentication systems, booking workflows, REST API integration, and ERP modules. Strong foundation in object-oriented programming, database normalization. Proven ability to design, develop, test, and deploy end-to-end web applications independently, with a growing interest in machine learning, data analytics, and cloud computing.

Technical Skills

- Programming Languages: Python, Java, JavaScript, SQL, C
- Web Development: HTML5, CSS3, Bootstrap, Flask, Jinja2
- Libraries: Pandas, Numpy, Matplotlib, Seaborn
- Databases: PostgreSQL, MySQL, Database Design, Normalization, Foreign Keys, Indexing, Query Optimization
- Tools & Platforms: Git, GitHub, VS Code, pgAdmin, MySQL Workbench.
- Emerging Skills: Machine Learning fundamentals, Data Science, Data Analysis, Cloud Computing basics (Azure).
- Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Communication, Time Management

Projects

Salon ERP System | Flask, PostgreSQL, Jinja2, Bootstrap,

Repository: <https://github.com/Aryan-Dongre/Salon-ERP-System>

Live URL: <https://salon-erp-system-pi6r.onrender.com>

- Developed a role-based Enterprise Resource Planning (ERP) platform in Python/Flask with five distinct user roles — Admin, Manager, Receptionist, Staff, and Customer — using the MVC architecture pattern.
- Implemented secure user authentication and authorization, appointment scheduling, customer relationship management (CRM), payment processing, and real-time dashboard analytics.
- Designed a normalized PostgreSQL relational database schema with foreign-key constraints to ensure data integrity and eliminate redundancy.
- Engineered end-to-end booking-to-payment workflows by using demo payment system and automated email notification system
- Applied software engineering best practices to streamline business operations, centralize data, and support data-driven decision-making.

Beauty Parlor Management System | Flask, MySQL, Bootstrap, HTML/CSS

Repository: <https://github.com/Aryan-Dongre/Beauty-Parlor-Management-Systems->

- Built a full-stack web application using Python, Flask, and MySQL with secure, session-based authentication and rolebased access control.
- Architected a relational database with normalized tables and structured entity relationships to support scalable data management.
- Developed a multi-service appointment booking module with dynamic date and time-slot selection and conflict validation.
- Automated customer booking and payment-tracking operations, improving service organization and operational efficiency.

Education

Bachelor of Technology (B.Tech), Artificial Intelligence & Data Science

Expected Graduation: 2028

- Relevant Coursework: Database Management Systems, Object-Oriented Programming, Machine Learning.

Certifications & Continuous Learning

- Actively building proficiency in Python, AI-ML, SQL, and full-stack web development through self-directed projects
[Certificate](#): Azure foundation by Microsoft, Data Analytics Job Simulation by Deloitte

Languages

- English — Professional Working Proficiency
- Hindi — Native Proficiency
